RUMANIA / Farm Animals. Honey Bee

Abs Jour: Ref Zhur-Biol., No 3, 1958, 12206

Author : Antal Ligia
Inst :
Title : The Importance of Fruit Gardens for the Honey Crop (Znacheniye plodovykh sadov dlya medosbora)

Orig Pub: Apicultura, 1957, No 5, 11-12

Abstract: In the spring, fruit gardens provide 70-80% of the nectar crop and thus occupy the first place among other melliferous sources. The nectar productivity of different fruit plants per 1 ha. is 10-40 kg. During the unfavorable years of 1955 and 1956, strong families of bees were bringing in at the time of blossoming of the gardens 600-800 g. daily. In order to have strong bee families in the spring, it is necessary to have recourse to the stimulating supplementary feeding in August.

TITLE: An electronic computer for registering meteorological phenomena

PERIODICAL: Referativnyy zhurnal, Avtomatika i radioelektronika, no. 12, 1961, 14, abstract 12B81 (országos meteorol. int. hivatal. kiadv", 1960, v. 23, 227-235)

TEXT: An analogue computer has been designed for the visual display of phenomena which have to be analyzed in conjunction with meteorology. A logarithmic-type indicating instrument is used as a visual indicator. The instrument is connected to the outputs of two logarithmic circuits, so that its deflection corresponds to the logarithm of the ratio of two input quantities. A short description of the arrangement and of procedure in the instrument scale is preceded by a description of the logarithmic instrument operation principle and by a survey of the possible variants of logarithmic electronic circuits. It is shown that it is possible to use the

TITLE: The effect of a city on the changes in the potential gradient of atmospheric electricity

PERIODICAL: Referativnyy zhurnal, Geofizika, no. 2, 1963, 35, abstract 2B234 (Időjárás, 1962, 66, no. 2, 90-95 (Hung.; summaries in Ger. and Eng.))

TEXT: The data were collected at the "Martsel D'yord'" observatory, situated SE of Budapest. The effect of the city on the potential gradient was clearly shown during the summer. These changes were caused by the wind blowing from the direction of the city. [Abstracter's note: Complete translation.]

Investigations were carried out to determine the role played by reduction of the blood pressure and of the amplitude in degenerative changes of the vessel wall. The results show that the decreased function of the elastic fibres of the vessel wall leads to atrophy. The degeneration of the vascular wall should also be considered from the viewpoint of the operative indication.

The growth-inhibiting effect on cancer of 1,2,5,6-dibenzanthracene. László Haranghy, Ferenc Gyergyay, and András Antalffy. *Acta Morphol. Acad. Sci. Hung.* 3, 183-90(1953). Simultaneous injection of 1.5 mg. of 1,2,5,6-dibenzanthracene (I) and implantation of exptl. round-cell sarcoma into white male rats resulted in definite inhibition of growth of the tumor. This effect was more marked on exptl. sarcoma that was implanted 22 days prior to injection of I. The same effect could be demonstrated on mature tumors. S. S.

"APPROVED FOR RELEASE: 06/05/2000 CIA-RDP86-00513R000101710017-3

Changes caused by p-dimethylaminoazobenzene and by the tumorogenic sodium salt of melanin in the period preceding cancerization. L. Haranghy, F. Gyergyay, E. Balogh, A. Antalffy, L. Róna, St. Sándor, and T. Tréger. *Acad. rep. populare Romîne, Filiala Cluj, Studii. cercetări patol.* 4, 335–55(1953).—By treating different groups of rats with p-dimethylaminoazobenzene (I) and with tumorogenic sodium salt of melanin (II) it was observed that I does not stimulate proliferation and that cancerogenic aromatic hydrocarbons cause cellular necrosis. The proliferations appearing in the liver are secondary processes caused by cellular necrosis. The pronounced reticular changes observed can be considered as a morphological manifestation of the beginning of an antitumorous immunity. The permanent alterations of the liver which precede the tumor are produced by the cancerogenic compds. of II. The addn. of cholesterol to I increases the harmful effect. The effect of II is similar to that of I and constantly appears 1st in the liver.

Emanuel Merdinger

TITLE: Investigations on metal dissolution with the aid of a rotating electrode of circular disk shape

SOURCE: Magyar kemiai folyoirat, no. 4, 1966, 159-162

TOPIC TAGS: electrode, reaction mechanism, cadmium, sulfuric acid, chemistry technique

ABSTRACT: A test setup, featuring a rotating electrode in circular disk shape, was used to investigate the mechanisms of the anodic dissolution of metals in electrolytes. Experiments involving the dissolution of cadmium in 1.0 N sulfuric acid were described. The processes involved here were almost exclusively of the diffusion-polarization type. At low current density values, there is also evidence of transgression polarization. The techniques employed and the results obtained were presented and discussed in some detail. Orig. art. has: 6 figures, 6 formulas, and 2 tables. [JPRS: 36,464]

390. ANTALÓCZY Z., BRETÁN M. and LÖVEI E. 2. Med. Klin., Univ. Budapest. Die Bedeutung der Veränderung des Milch- und Brenztraubensäurespiegels des Blutes bei kardialer Dekompensation *The significance of changes in the serum lactic acid and pyruvic acid levels in heart failure* Wien. klin. Wschr. 1956, 68 20 (387—391) Tables 2

In 47 patients the serum lactic acid was examined 89 times, and the serum pyruvic acid levels 91 times. In the severely decompensated state the lactic acid concentration was decreased. With increasing recovery and compensation of the circulation it rises again. The pyruvic acid level is also frequently lowered in heart failure. The author is of the opinion that the lowering of the lactic acid and pyruvic acid levels — both of which are sources of energy for the myocardium — results in an impaired nutrition of the myocardium. This disturbance of metabolism may cause heart failure. As a therapeutic consequence the authors advise in addition to the common cardiac tonics the administration of laevulose and ACTH or cortisone, which increase the production of glycogen and increase the concentration of the serum lactic acid and pyruvic acid (notwithstanding the unfavourable effect of retention of water and salts, etc.).

AUTHOR: Antalová, A.

TITLE: Notes on the proper motions of late-type sunspots

PERIODICAL: Referativnyy zhurnal, Astronomiya i Geodeziya, no. 4, 1962, 53, abstract 4A428 ("Byul. astron. in-tov Chekhoslovakii", 1961, v. 12, no. 3, 108 - 114, English; Russian summary)

TEXT: Observing a sunspot at the +48° heliographic latitude in 1957, Waldmeier established that the angular velocity of this sunspot changed when the sunspot passed across the central meridian, and that its proper motion, prior to that instant, had a direction opposite to diurnal rotation. During the transit across the central meridian the sunspot ceases to move. The author holds Waldmeier's explanation to be not final, adducing the following arguments: First, "backward" proper motion of sunspots amounts, on an average, to 0°.05 per day, whereas the motion of the sunspot in question was 0°.57 per day; second, backward proper motion of sunspots ceases, as a rule, shortly before sunspot disappearance, whereas in the case considered this motion stopped immediately after sunspot
